Important notice

The information in this Financial Supplement is as of March 31, 2020 only, and Global Atlantic Financial Limited and its affiliates ("Global Atlantic") undertake no obligation to update or correct the information in this Financial Supplement.

Global Atlantic makes no representation or warranty, express or implied, with respect to the fairness, correctness, accuracy, reasonableness or completeness of any of the information contained in this Financial Supplement. Global Atlantic does not accept any liability whatsoever for any direct, indirect or consequential losses (in contract, tort or otherwise) arising from the use of this Financial Supplement or its contents or any reliance on the information contained herein.

Certain information contained in this Financial Supplement constitutes "forward-looking statements," which can be identified by the use of forward-looking terminology such as "may," "will," "should," "expect," "anticipate," "project," "estimate," "target," "intend," "continue" or "believe," or the negatives thereof or other variations thereon or comparable terminology. Due to various risks and uncertainties, actual events or results or the actual performance may differ materially from those reflected or contemplated in such forward-looking statements. Past performance is not a guarantee of future results.

This Financial Supplement does not and shall not constitute an offer to buy or sell, or the solicitation of an offer to buy any securities of Global Atlantic. This Financial Supplement is not for distribution. THIS FINANCIAL SUPPLEMENT DOES NOT DISCLOSE THE RISKS AND OTHER SIGNIFICANT ISSUES RELATED TO AN INVESTMENT IN THE SECURITIES OF GLOBAL ATLANTIC. INVESTORS SHOULD ENSURE THAT THEY FULLY UNDERSTAND THE TERMS OF THE RELEVANT SECURITIES AND ANY APPLICABLE RISKS PRIOR TO TRANSACTING IN SECURITIES OF GLOBAL ATLANTIC. None of the information contained herein has been filed with the U.S. Securities and Exchange Commission, any securities administrator under any securities laws of any U.S. or non-U.S. jurisdiction or any other U.S. or non-U.S. governmental or self-regulatory authority. No such governmental authority or self-regulatory authority will pass on the merits of the adequacy of the information contained herein. Any representation to the contrary is unlawful.

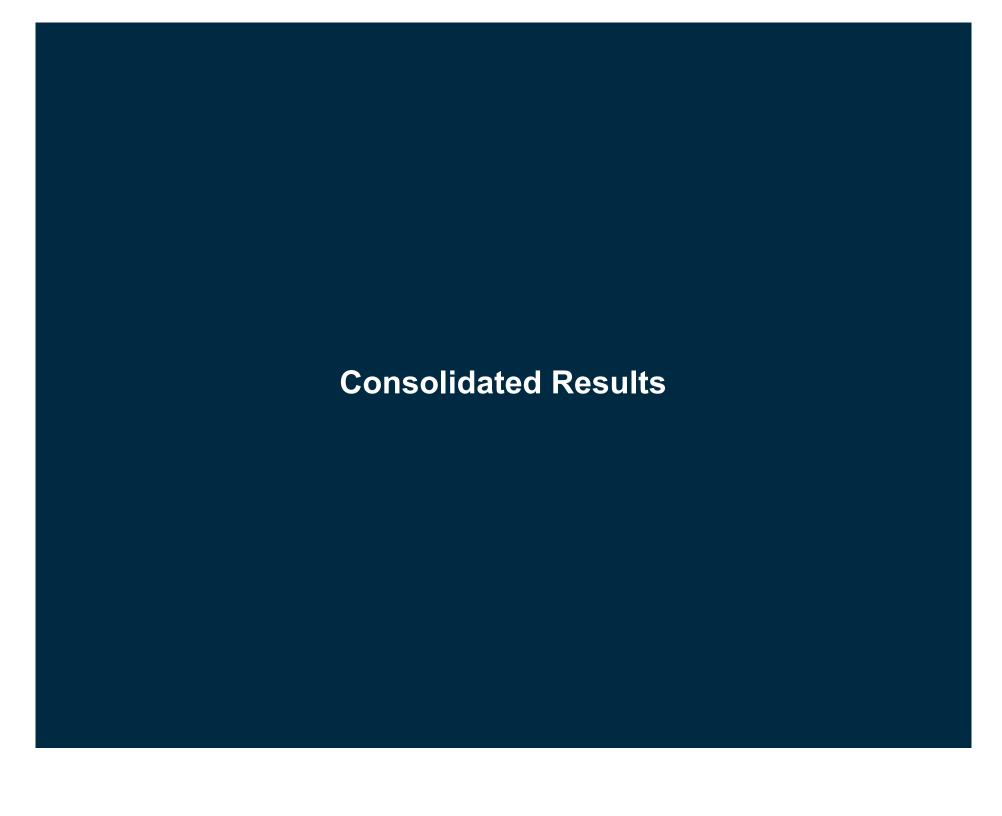

Financial Supplement – First Quarter 2020 Credit Ratings

This list is provided for informational purposes only. Ratings are not recommendations to buy, sell, or hold securities, and each rating may be revised or revoked at any time at the sole discretion of the rating organization. Financial strength ratings apply to the issuing companies and do not apply to any specific product or underlying fund. Each individual insurer is solely responsible for the benefits and obligations of the products it issues.

	Risk-based capital
	as of December 31, 2019
U.S. insurance subsidiaries ⁽²⁾	431%
Estimated consolidated RBC, including Bermuda subsidiaries ⁽³⁾	481%

⁽¹⁾ The Company has designated an interest rate swap to hedge the interest rate risk associated with the Senior Notes issued in October 2019 and due in 2029 in a fair value hedge. The 2029 Senior Notes are reported in debt in the consolidated balance sheets and are hedged through their maturity in October 2029. For the quarter ended March 31, 2020, the carrying amount of the hedged 2029 Senior Notes was \$536 million, which is increased by a fair value hedge adjustment of \$42 million. A gain due to changes in the fair value of the swap of \$57 million was recognized in interest expense in the consolidated statements of income for the quarter ended March 31, 2020, fully offsetting the fair value change in the hedged 2029 Senior Notes.

⁽²⁾ Risk-Based Capital, or "RBC", for Commonwealth Annuity & Life Insurance Company, which consolidates all our U.S. insurance subsidiaries

⁽³⁾ Estimated consolidated RBC ratio includes our Bermuda insurance subsidiaries and the cash and securities at holding companies. U.S. Company Action Level, or "CAL", RBC factors are applied to the assets and liabilities of our Bermuda insurance subsidiaries to determine their CAL. Certain balances reflected in Total Available Capital, or "TAC", for Bermuda insurance subsidiaries are reported under an economic or principle-based approach.

⁽¹⁾ In the first quarter of 2020, we revised our methodology for the segment allocation of general and administrative expenses. This change resulted in the movement of certain expenses to Corporate & Other that are attributable to the corporate entity and not core to the operations of the Retirement or Life segments. This change is being applied prospectively and the prior period segment results have not been adjusted to conform to the current quarter.

⁽²⁾ For year-to-date periods, calculated by averaging total assets and adjusted invested assets, as of the end of each quarter in the applicable trailing period; For quarterly periods, calculated by averaging the current and immediately preceding quarter.

⁽³⁾ Interim periods are annualized.

Note: In our Retirement segment, individual channel sales of annuities include all money paid into new and existing contracts. Individual channel sales of traditional life products are based on commissionable premium, a commonly used industry sales metric, and individual channel sales for preneed life are based on the face amount of insurance. Traditional life sales do not include the recurring premiums that policyholders may pay over time. New business volume from our institutional channel is based on the assets assumed, net of any ceding commission.

Financial Supplement – First Quarter 2020 Non-GAAP financial measures

In addition to presenting our results in accordance with GAAP, we use certain non-GAAP measures commonly used in our industry in analyzing performance. We believe the use of these non-GAAP measures, together with the relevant GAAP measures, provides a better understanding of our results of operations, financial condition, and the underlying profitability drivers of our business. These measures should be considered supplementary to our results in accordance with GAAP and should not be viewed as a substitute for the GAAP measures. Our definitions of the various non-GAAP measures and other metrics discussed in this information statement may differ from those used by other companies.

The following key operating or non-GAAP measures should not be viewed as substitutes for the most directly comparable financial measures calculated in accordance with GAAP:

Key operating or non-GAAP measure	Comparable GAAP measure
Adjusted operating earnings, net of tax	Net income attributable to Global Atlantic Financial Limited shareholder
Adjusted operating earnings, before income taxes	Income before income taxes
Adjusted income tax expense (benefit)	Income tax expense (benefit)
Adjusted operating tax rate	Effective tax rate
ROE excluding AOCI	ROE
Adjusted operating ROE excluding AOCI	ROE
Adjusted invested assets	Total investments
Adjusted net investment income	Net investment income
Net investment earned rate	Investment yield
Adjusted total assets	Total assets
Adjusted operating return on assets, net of tax	Return on assets
Components of adjusted operating return on assets, net of tax	Components of return on assets
Adjusted net investment return ratio	Net investment return ratio
Adjusted net cost of insurance ratio	Net cost of insurance ratio
Adjusted general and administrative expense ratio	General and administrative expense ratio
Adjusted interest expense ratio	Interest expense ratio
Adjusted income tax expense ratio	Income tax expense ratio
Shareholders' equity excluding AOCI	Total Global Atlantic Financial Limited shareholders' equity
Debt-to-capitalization excluding AOCI	Debt-to-capitalization
Adjusted debt-to-capitalization excluding AOCI	Debt-to-capitalization
New business volume	No comparable GAAP measure

Adjusted operating earnings, net of tax

Adjusted operating earnings, net of tax, a commonly used operating measure in the life insurance industry, is a non-GAAP measure used to evaluate our financial performance by excluding items that tend to be highly variable from period to period, primarily based on market volatility and non-core expenses. These adjustments are reported gross of income tax and, where applicable, net of offsets related to amortization of DAC, VOBA, unearned revenue reserves and deferred sales inducements, policy fees charged to policyholders to cover benefits, and changes to reserves for certain guaranteed benefits.

Our adjusted operating earnings, net of tax, is equal to reported net income attributable to Global Atlantic Financial Limited shareholders adjusted to eliminate the impact of items in the categories as described below. Adjusted operating earnings, net of tax should not be used as a substitute for net income attributable to Global Atlantic Financial Limited shareholders as calculated in accordance with GAAP. However, we believe the adjustments to net income attributable to Global Atlantic Financial Limited shareholders are useful to gaining an understanding of our results of operations. We adjust for these items as we believe that these items distort the ability to make a meaningful evaluation of our business:

- Investment (gains) losses, net of offsets Investment (gains) losses adjustments consist primarily of the following:
 - · Realized (gains) losses on the sale of AFS securities, net of offsets.
 - Change in assumed and ceded modified coinsurance and funds withheld at interest embedded derivatives and related trading securities, net of offsets the change in the fair value of embedded derivatives underlying reinsurance with assumed and ceded modified coinsurance and funds withheld at interest and related trading securities, net of offsets. The total change in the embedded derivatives and trading securities will net to zero over the life of the reinsurance contract.

- Unrealized (gains) losses, impairments and other investment, derivative and hedging (gains) losses, net of offsets are comprised of (1) fair value adjustments related to certain policyholder and closed block liabilities held under the fair value option, (2) hedging derivative gains and losses not related to fixed-indexed annuities, indexed universal life contracts and variable annuities, (3) allowance for loan losses and (4) net OTTI.
- Renewable energy income, net of offsets and non-controlling interest we account for our investments in renewable energy using either the equity method of accounting or consolidating. Renewable energy income can fluctuate significantly from period to period primarily driven by the application of the hypothetical liquidation at book value method of allocating income. Such fluctuations are reported in net investment income and also within net income attributable to redeemable and non-redeemable non-controlling interests. We adjust for the reported net investment income and redeemable and non-redeemable non-controlling interest (in excess of), or less than, our long-term return expectations for those investments, net of offsets.
- Equity-method (income) loss attributable to strategic equity investments the equity method income or loss attributable to our strategic equity investments, which currently consists of our investments in the limited partnership interest in the acquisition vehicle formed in connection with the sale of The Hartford's run-off life and annuity business, or "Talcott Resolution," and Origis USA, LLC in which we acquired a minority equity interest in September 2018. Origis USA, LLC is the holding company of Origis Energy, or "Origis," a utility-scale solar developer. We exclude these investments from adjusted operating earnings as our investments in these entities are strategic in nature, and not for the purpose of generating investment income.
- Change in the fair value of derivatives and embedded derivatives for fixed-indexed annuities, indexed universal life contracts and variable annuities, net of offsets consists primarily of (1) the period-to-period change in the fair value of derivatives hedging the market risk of fixed-indexed annuities, indexed universal life contracts and variable annuities, (2) the change in the fair value of embedded derivatives associated with changes in financial market conditions, such as the level of interest rates and equities and (3) the rider fees attributable to the guaranteed minimum withdrawal benefit offered under certain variable annuities.
- Transaction, conversion and integration expenses the expenses incurred in connection with our potential initial public offering, in connection with converting and integrating a policy administration platform acquired as part of a business combination, which are not part of our core operations, and certain other expenses that are not related to our underlying profitability drivers. Conversion and integration costs include reserves for regulatory, legal and related costs and the cost of providing benefits in recognition of the administrative disruption imposed by the conversion.
- Income tax adjustments the income tax impact of the foregoing adjustments. The income tax impact is calculated using our estimate of the annual adjusted operating tax rate. The adjusted operating tax rate could differ from the company's effective tax rate as determined under GAAP.

Adjusted operating earnings, before income taxes

Adjusted operating earnings, before income taxes is equal to reported income before income taxes adjusted for the adjustments as described above under "—Adjusted operating earnings, net of tax," with the exception of the adjustments for income taxes and the non-controlling interest component of the adjustment for renewable energy income (loss). Adjusted operating earnings, before income taxes should not be used as a substitute for income before income taxes as calculated in accordance with GAAP. However, we believe the adjustments to income before income taxes are useful to gaining an understanding of our results of operations.

Adjusted income tax expense and adjusted operating tax rate

Adjusted income tax expense is equal to reported income tax expense adjusted for income tax and tax reform adjustments as described above under "—Adjusted operating earnings, net of tax." Adjusted income tax expense should not be used as a substitute for income tax expense as calculated in accordance with GAAP. However, we believe the adjustments to income tax expense are useful to gaining an understanding of our results of operations.

Adjusted operating tax rate is equal to adjusted income tax expense divided by adjusted operating earnings, before income taxes. Adjusted operating tax rate should not be used as a substitute for effective tax rate as calculated in accordance with GAAP. However, we believe the adjusted operating tax rate is useful to gaining an understanding of our results of operations.

ROE excluding AOCI and adjusted operating ROE excluding AOCI

We use ROE excluding AOCI and adjusted operating ROE, excluding AOCI to evaluate our financial performance by excluding items that tend to be highly variable from period to period based on market volatility and non-core expenses. AOCI varies period-to-period in a manner inconsistent with our underlying profitability drivers, as the majority of such fluctuation is related to the market volatility of the unrealized gains and losses associated with our AFS securities. Accordingly, we believe using measures which exclude AOCI is more effective in analyzing the trends of our operations. ROE excluding AOCI and adjusted operating ROE, excluding AOCI should not be used as a substitute for ROE as calculated in accordance with GAAP. However, we believe the adjustments to equity and earnings are useful to gaining an understanding of our results of operations.

Adjusted invested assets

Adjusted invested assets represent the investments that back our policyholder liabilities as well as surplus assets. Adjusted invested assets is used in the computation of net investment earned rate, which allows us to analyze the performance of our investment portfolio. Adjusted invested assets includes (1) total investments on the consolidated balance sheets with available-for-sale securities at cost or amortized cost, (2) cash, cash equivalents and restricted cash, and (3) accrued investment income Adjusted invested assets excludes the following items that are included in total investments but do not produce net investment income reflective of ongoing operations: (1) assets associated with funds withheld at interest liabilities related to business exited through reinsurance agreements, (2) derivative assets and derivative collateral liabilities (offsetties (offsetties offsetties offsetties), (3) embedded derivatives associated with funds withheld at interest receivables, (4) securities sold under repurchase agreements, (5) investment related receivables and payables, (6) redeemable non-controlling interests in consolidated renewable energy partnerships, and (7) strategic equity investments, which currently consists of our investments in Talcott Resolution and Origis. We include the underlying investments supporting our assumed funds withheld at interest and modified co-insurance agreements in our adjusted invested assets calculation in order to match the assets with the income received.

Adjusted invested assets are allocated to our Retirement and Life segments based on the segment's respective statutory reserves and management's estimate of the statutory capital levels necessary to support each segment's business, which takes into account regulatory, rating agency and business requirements. The remainder of consolidated adjusted invested assets over the portion allocated to Retirement and Life is reflected within Corporate & Other.

Adjusted invested assets should not be used as a substitute for total investments as calculated in accordance with GAAP. However, we believe the adjustments to total investments provide a view of the assets from which we earn investment income.

Adjusted net investment income and net investment earned rate

Adjusted net investment income is calculated as reported net investment income adjusted for renewable energy income (loss) and equity-method (income) loss attributable to strategic equity investments as described above under "—Adjusted operating earnings, net of tax," excluding the impact of non-controlling interest. Adjusted net investment income should not be used as a substitute for net investment income. However, we believe adjusted net investment income is significant to gaining an understanding of the overall performance of our portfolio of adjusted invested assets.

Net investment earned rate is computed as adjusted net investment income, as described above, divided by the average adjusted invested assets for the relevant period. Net investment earned rate should not be used as a substitute for investment yield as calculated in accordance with GAAP. However, we believe net investment earned rate is useful to gaining an understanding of the overall performance of our adjusted invested assets.

Adjusted total assets

Adjusted total assets includes adjusted invested assets, as defined above, plus (1) separate accounts, (2) separate account assets associated with variable annuities and variable universal life policies whereby those assets are withheld by the cedent by terms of the reinsurance contract on a funds-withheld coinsurance basis, and (3) gross insurance intangible assets and liabilities.

Adjusted total assets should not be used as a substitute for total assets as calculated in accordance with GAAP. However, we believe the adjustments to derive adjusted total assets are necessary to reflect those assets from which we generate earnings.

Adjusted operating return on assets, net of tax

Adjusted operating return on assets, net of tax is equal to adjusted operating earnings, net of tax divided by average adjusted total assets. Adjusted operating return on assets, net of tax should not be used as a substitute for return on assets, as calculated in accordance with GAAP. However, we believe adjusted operating return on assets, net of tax is useful to gaining an understanding of our results of operations relative to the underlying asset base which generates earnings.

Components of adjusted operating return on assets, net of tax

When analyzing return on assets and adjusted operating return on assets, net of tax, we also consider certain ratios that aggregate to return on assets and adjusted operating return on assets, net of tax, namely: (1) net investment income as a percentage of average adjusted total assets and adjusted net cost of insurance as a percentage of average adjusted total assets and adjusted net cost of insurance as a percentage of average adjusted total assets (the combination of (1) and (2) is also referred to as the "net underwriting ratio", or the "adjusted net underwriting ratio"), (3) general and administrative expenses as a percentage of average total assets and adjusted general and administrative expenses as a percentage of average adjusted total assets (4) interest expense as a percentage of average total assets and adjusted total assets and (5) income-tax expense as a percentage of average total assets. Altogether, we refer to the foregoing as the "components of return on assets," or "the components of adjusted operating return on assets, net of tax."

The components of adjusted operating return on assets, net of tax, individually or in the aggregate, should not be used as a substitute for the respective or aggregated components of return on assets, as calculated in accordance with GAAP. However, we believe adjustments to the respective or aggregated components of return on assets are useful to gaining an understanding of our results of operations relative to our underlying asset base generating earnings.

The components of adjusted operating return on assets, net of tax, are defined as follows:

Adjusted net investment return ratio

Adjusted net investment return ratio is calculated in a similar way to "—Net Investment Earned Rate," as discussed above, but divides adjusted net investment income by average adjusted total assets as the denominator, instead of average adjusted invested assets.

Adjusted net cost of insurance and adjusted net cost of insurance ratio

Adjusted net cost of insurance is equal to reported net underwriting income, excluding net investment income, and adjusted for (1) investment gains (losses) other than renewable energy income (loss) and strategic equity investment income (loss); (2) change in the fair value of derivatives and embedded derivatives associated with fixed-indexed annuities, indexed universal life contracts and variable annuities; and (3) transaction, conversion and integration expenses. These adjustments are reported gross of income tax and, where applicable, net of offsets related to (1) DAC, VOBA, URR and DSI amortization; (2) changes to reserves for certain guaranteed benefits; and (3) policy fees to cover benefits, as described above. Adjusted net cost of insurance ratio is calculated as adjusted net cost of insurance divided by average adjusted total assets. Net cost of insurance ratio is calculated as net cost of insurance divided by average total assets. Refer to "—Adjusted operating earnings, net of tax" above for additional details regarding the foregoing adjustments.

Adjusted general and administrative expenses and adjusted general and administrative expense ratio

Adjusted general and administrative expense is equal to reported general and administrative expense adjusted for certain transaction, conversion and integration expense, as described above. Adjusted general and administrative expense ratio is adjusted general and administrative expense divided by average adjusted total assets.

Adjusted interest expense ratio

Adjusted interest expense ratio is interest expense, as reported, divided by average adjusted total assets.

Adjusted income tax expense ratio

Adjusted income tax expense ratio is adjusted income tax expense, as defined above under "—Adjusted income tax expense and adjusted operating tax rate," divided by average adjusted total assets.

Shareholders' equity excluding AOCI

Shareholders' equity excluding AOCI is calculated as total Global Atlantic Financial Limited shareholders' equity, as reported, less AOCI, as reported. Shareholders' equity excluding AOCI should not be used as a substitute for total Global Atlantic Financial Limited shareholders' equity as calculated in accordance with GAAP. However, we believe the adjustments to shareholders' equity are useful to gaining an understanding of our overall results of operations and financial condition.

Debt-to-capitalization excluding AOCI and adjusted debt-to-capitalization excluding AOCI and debt fair value adjustments

Debt-to-capitalization excluding AOCI is calculated as debt divided by the aggregate of total Global Atlantic Financial Limited shareholders' equity and debt, or "capitalization," adjusted to exclude AOCI. Adjusted debt-to-capitalization excluding AOCI and debt fair value adjustments is calculated using debt adjusted to exclude 25% of the outstanding principal amount of the subordinated debentures as an equity credit, and an adjustment to both the debt and capitalization numerator and denominator for the cumulative changes in fair value recognized due to the application of hedge accounting. We exclude a portion of the outstanding principal amount of the subordinated debentures because their terms result in the subordinated debentures receiving equity credit under certain NRSRO methodologies. Adjusted debt-to-capitalization excluding AOCI should not be used as a substitute for debt-to-capitalization as calculated in accordance with GAAP debt divided by capitalization. However, we believe the adjustments to our debt-to-capitalization are useful to gaining an understanding of our overall financial condition.

New business volume

In our Retirement segment, individual channel new business volume of traditional life are based on commissionable premium, a commonly used industry sales metric, and individual channel new business volume for preneed life are based on the face amount of insurance issued. Traditional life products include indexed universal, fixed universal and term life sold both to individuals in the individual life market, and to corporations in the corporate life market. We also refer to new business volume originated through the individual channel as "sales." Institutional channel new business volume is based on the assets assumed, net of any ceding commission. New business volume should not be used as a substitute for revenue as calculated in accordance with GAAP. However, we believe new business volume statistics are useful to gaining an understanding of our overall results of operations.
